HOW THE DAY RUNS

Talks and exercises

TALK (5 MIN)	IN BETWEEN (5 MIN)
01 Cup of tea — users, needs, the map	Sketch the chain
02 Strategy and patterns	Spot a pattern
03 Knowledge base	Find the constraint
04 A real map — EM tooling	Pick a play
05 Your turn, plus spare sections	—

01

Evolution

Two axes, one chain

- Up: what the user sees. Down: what they never see
- Right: boring and buyable. Left: rare and changing
- Links are dependencies, not org charts
- A map is a chain of needs

LEGEND

the user

a user need

we rent this

we make this

the bottleneck

resists change

market evolution

we push it right

we hold it back

How much map?

- Maps grow until they stop saying anything
- Ask: what is the primary constraint here?
- Map the user, the need, the path to it
- Theory of Constraints: the rest can wait

IN BETWEEN · 5 MIN

Sketch the chain

- Your morning: three needs, nothing else
- Stack them: most visible on top
- No evolution axis — leave it out
- Show a neighbour — argue one placement

02

Strategy and patterns

SUN TZU

Five factors

- Purpose — why we compete
- Landscape — where we stand
- Climate — what changes around us
- Doctrine — how we behave
- Leadership — the play we pick

Purpose
why
Landscape
observe
Climate
orient
Doctrine
decide
Leadership
act
STRATEGY CYCLE

CLIMATE

Things you can't stop

- Everything evolves: genesis to commodity
- Success breeds inertia
- Efficiency enables innovation
- You can anticipate these, not avoid them

"Tactics without strategy
is the noise before defeat.
Strategy without tactics is
the slowest route to victory."

— attributed to Sun Tzu

IN BETWEEN · 5 MIN

Spot a pattern

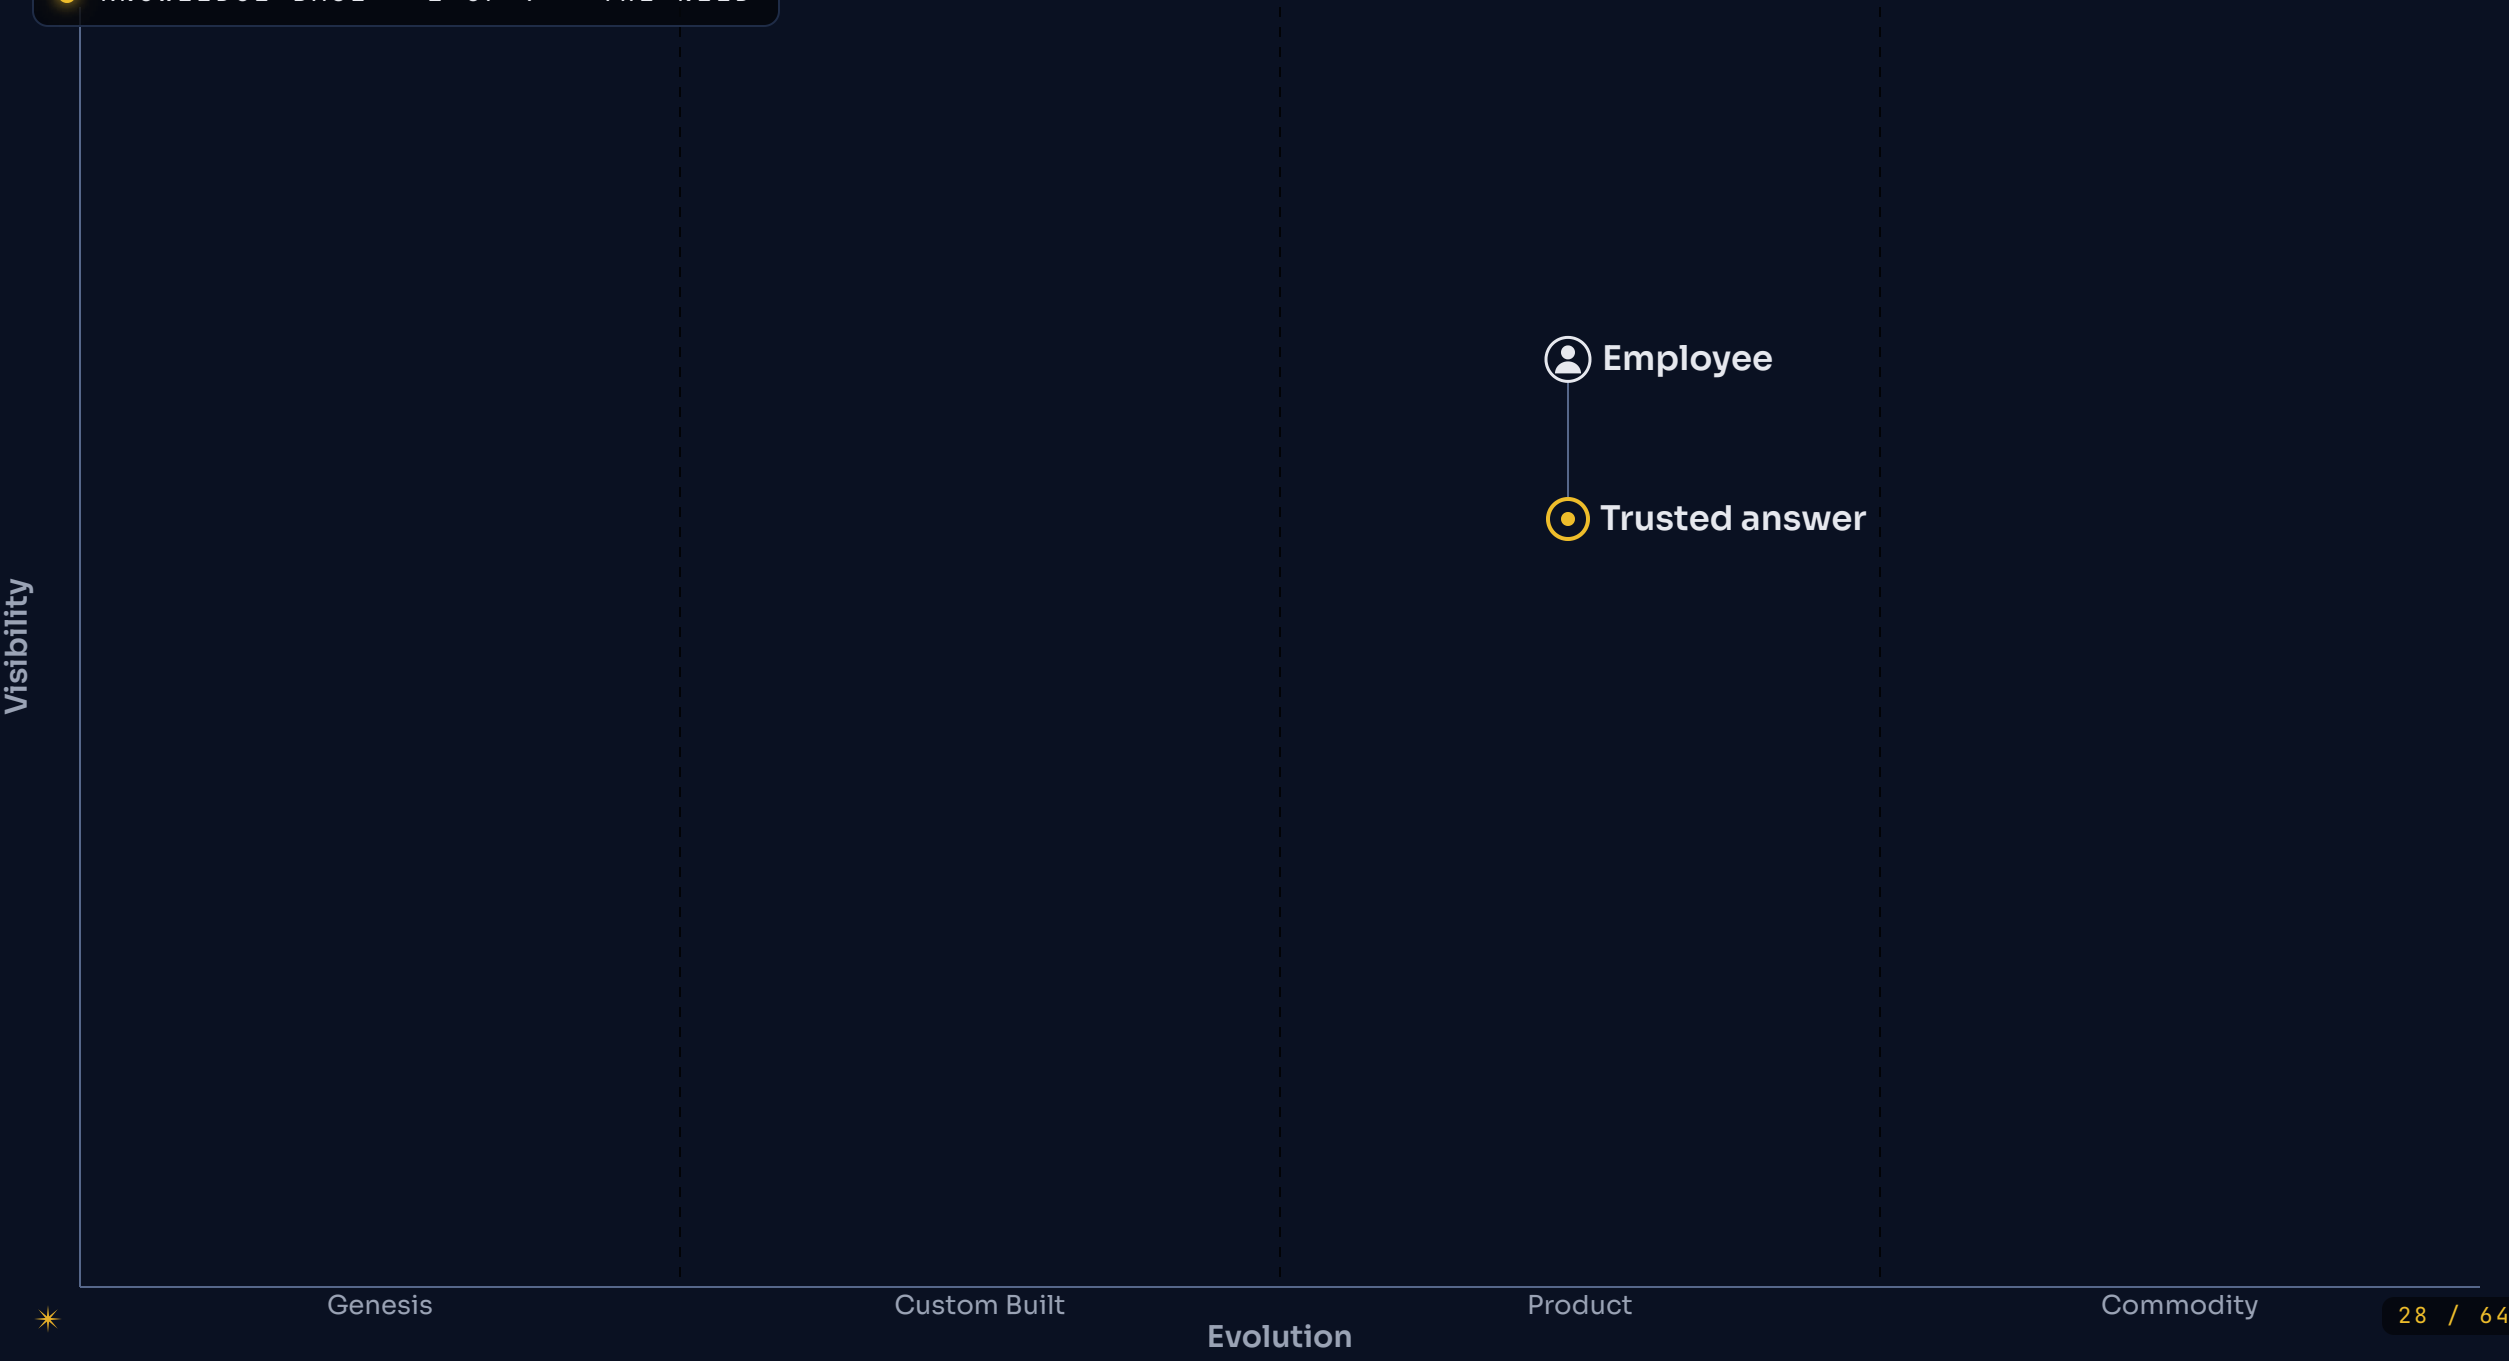

- Name one pattern from the list you have seen
- Where did you see it?
- What did it predict?

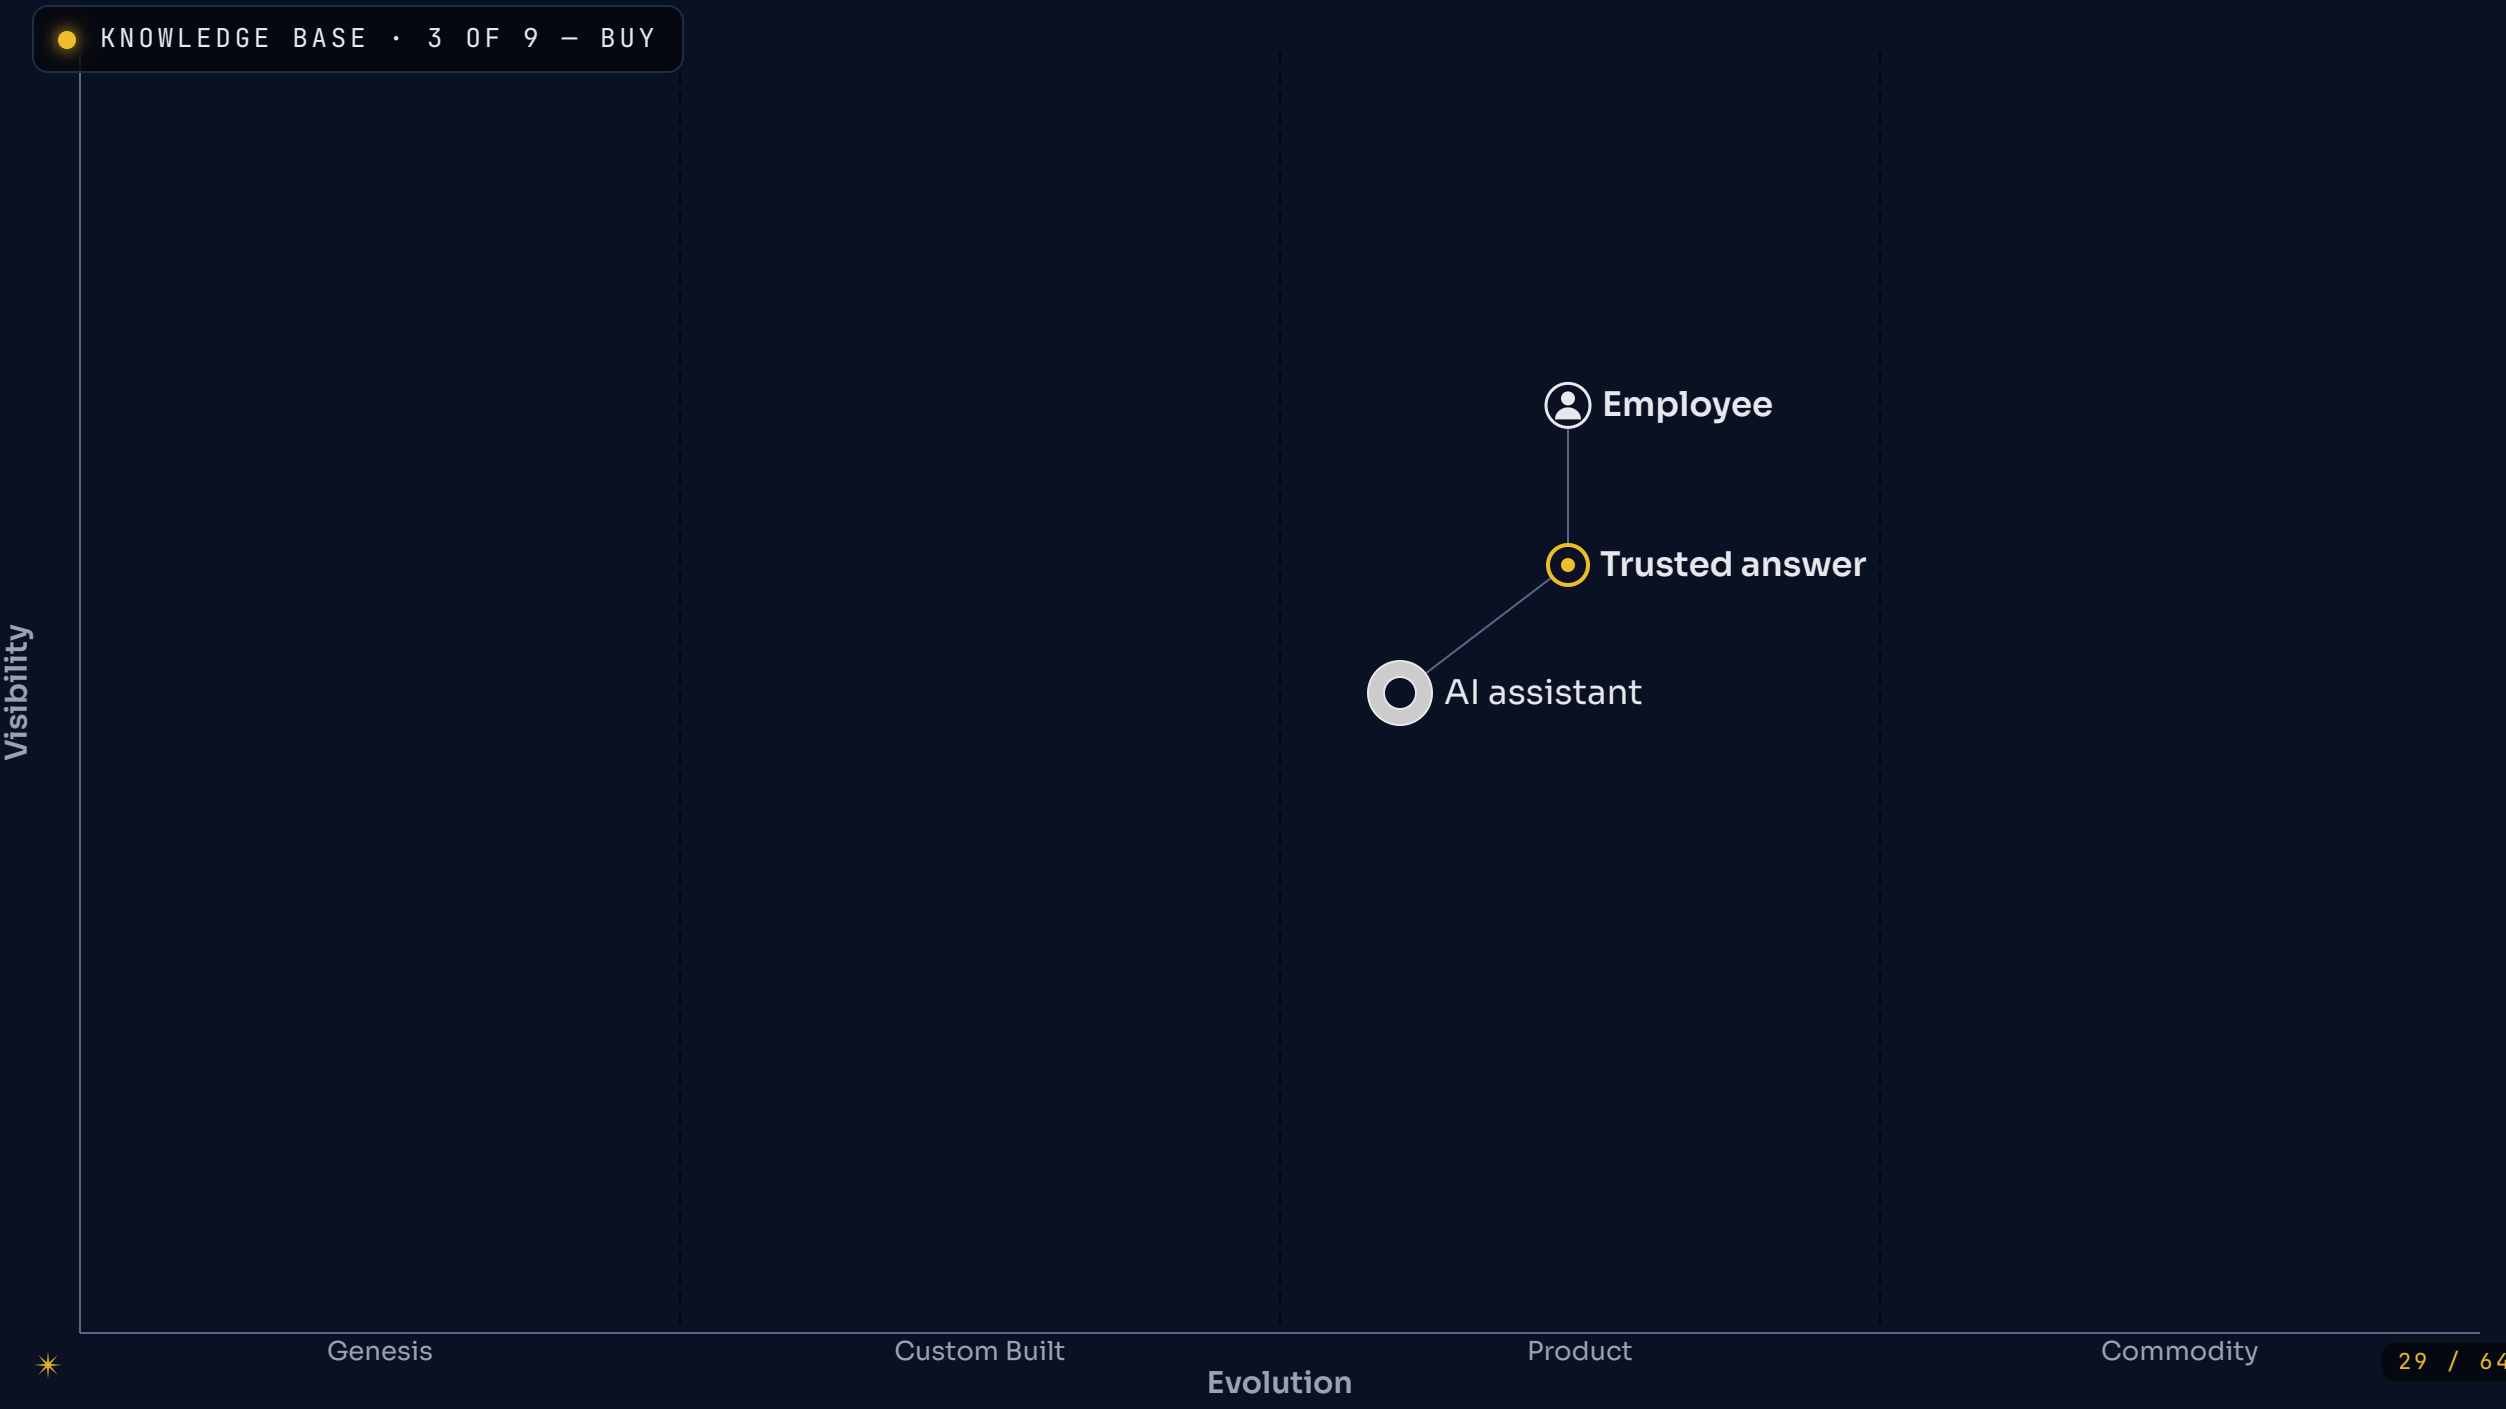

03

Knowledge base

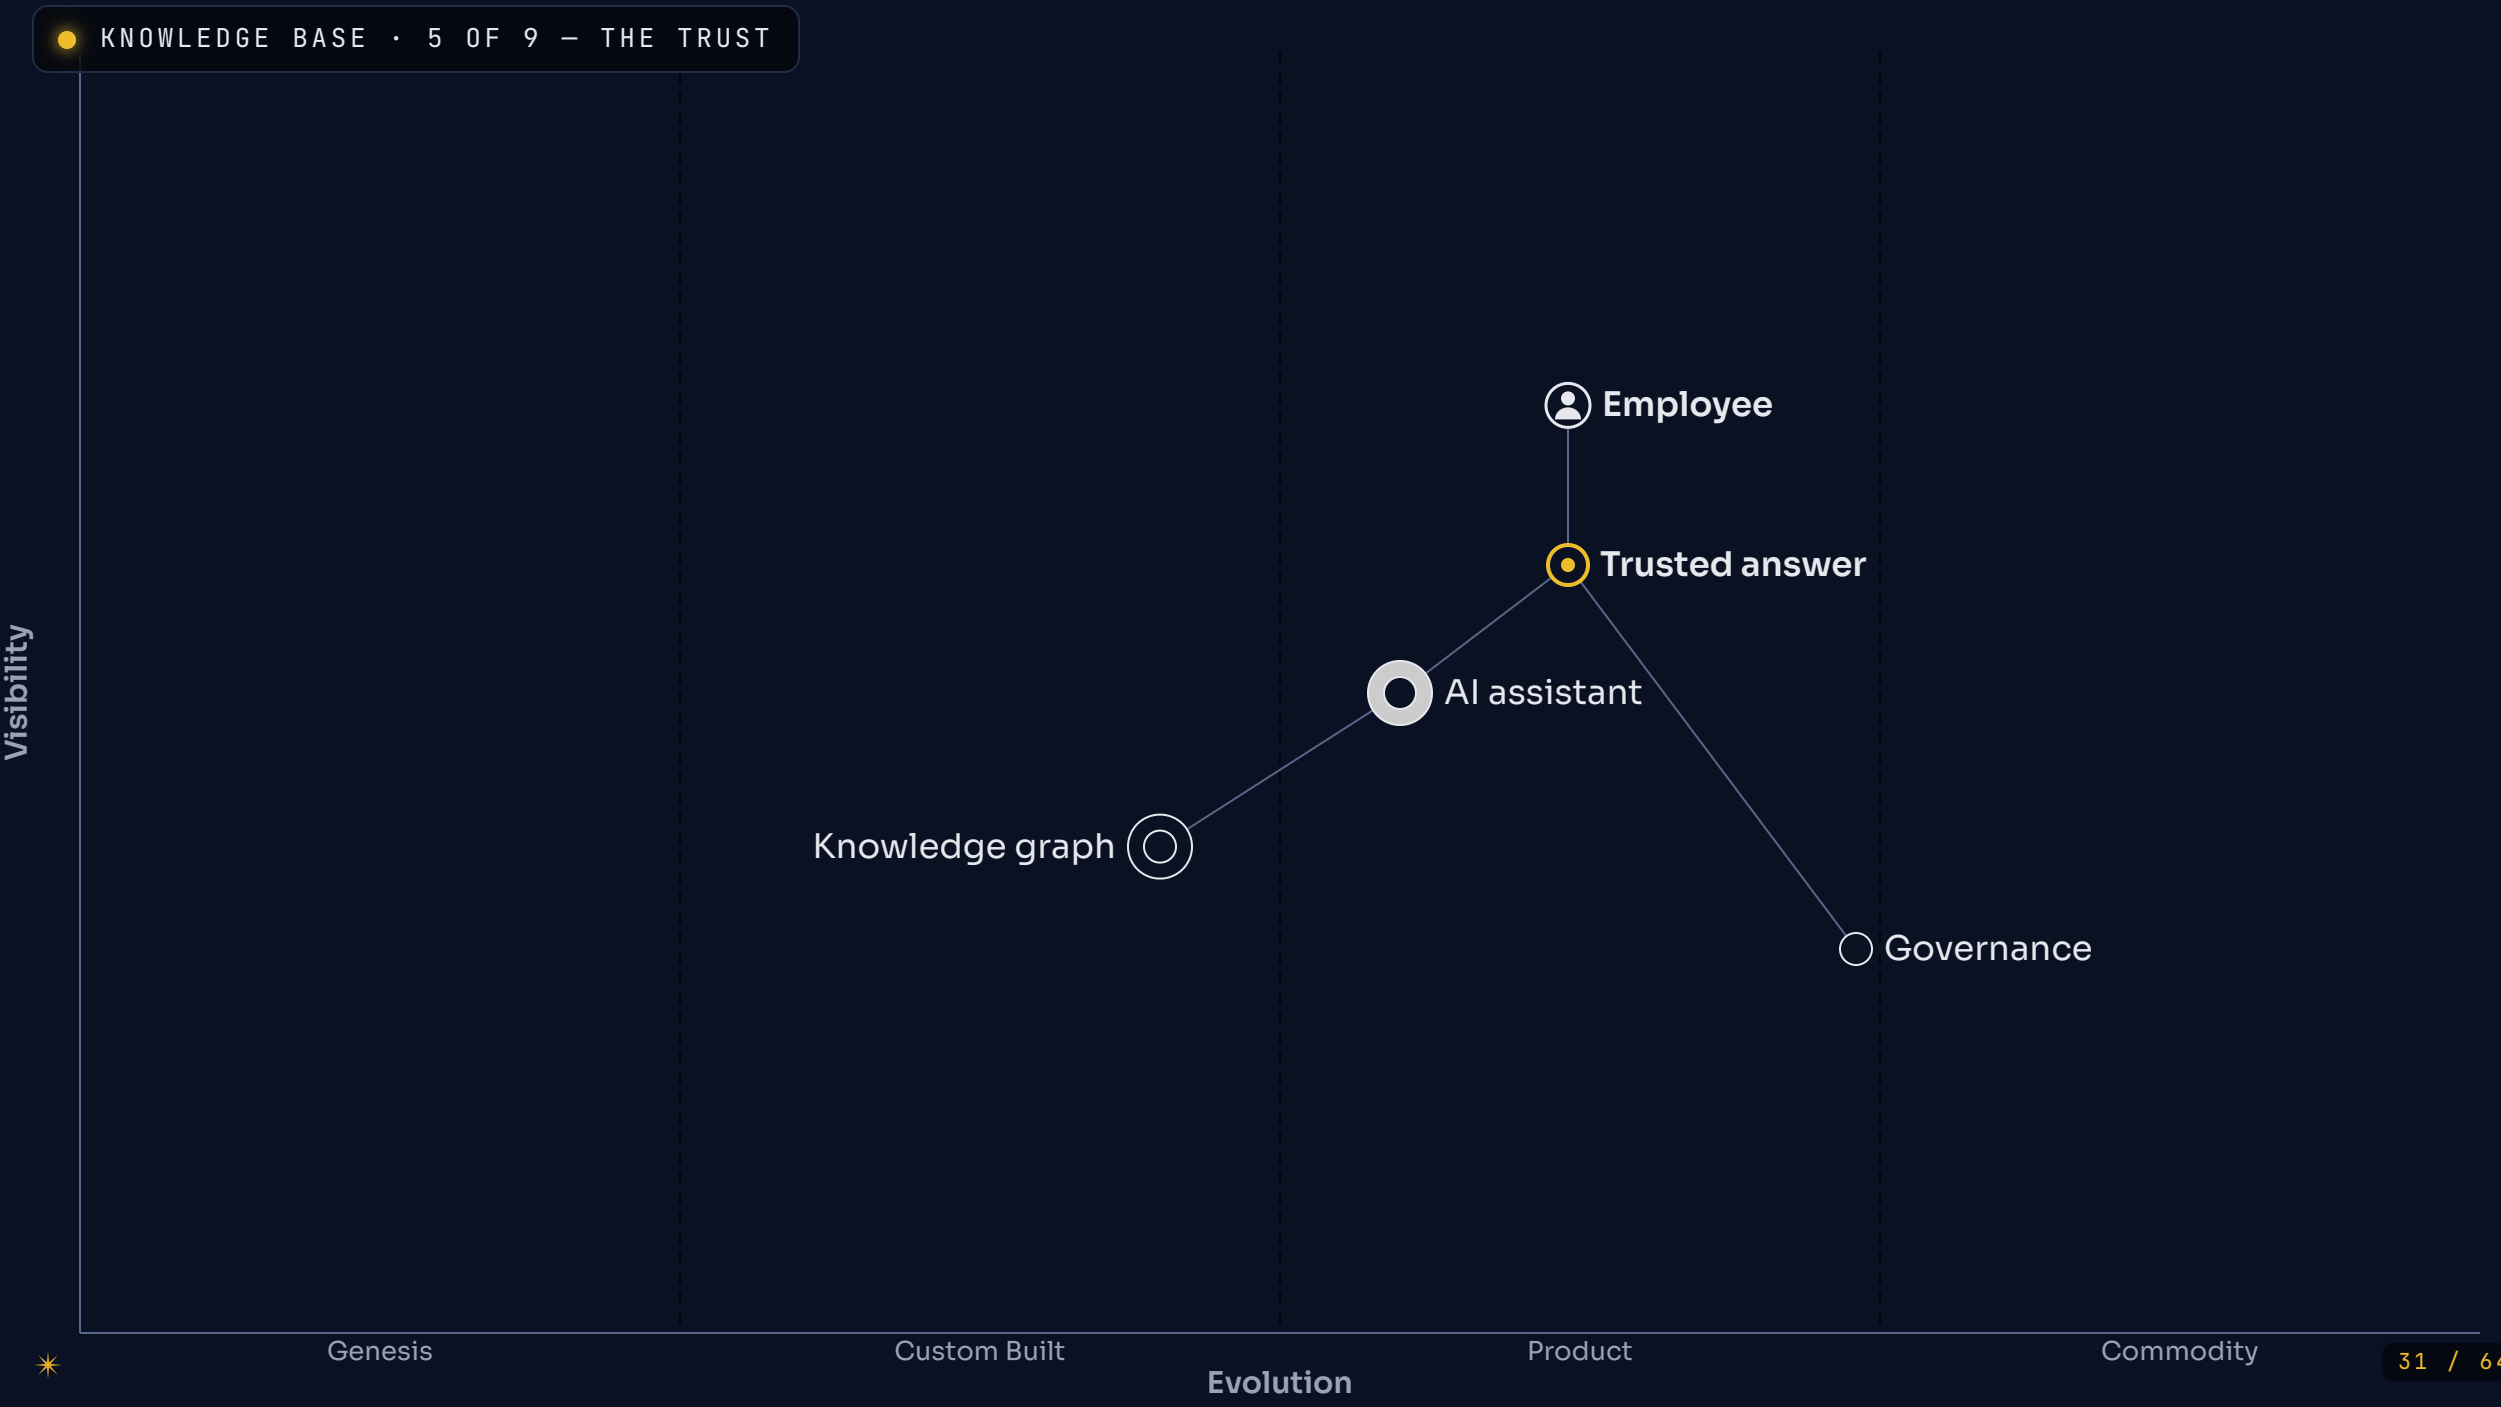

KNOWLEDGE BASE · 1 OF 9 — THE USER

KNOWLEDGE BASE

Trust is the product

- Buy the assistant, the model, the plumbing
- Build the graph — where you differ
- The ontology carries the inertia
- The constraint sits at governance — map there

IN BETWEEN · 5 MIN

Find the constraint

- On the knowledge base map: the bottleneck
- Circle it — is it also the most inert?
- What would elevating it change?

Where this can go

- Evolve the schema — it becomes the standard
- Mature the tooling past custom built
- Treat AI as a utility — it already is
- The worth is in the conversation

IN BETWEEN · 5 MIN

Pick a play

- One component worth evolving
- Who loses when it moves right?
- The play: standards game, ILC, bundling?
- Would you dare it this quarter?

05

Your turn

EXERCISE · 10 MIN

Draw one chain

- Pick a real user and one real need
- Add three things the need depends on
- Stack them: most visible at the top
- Place each on the evolution axis

EXERCISE · 10 MIN

Add the truth

- Mark what you would buy tomorrow
- Mark what hurts to change
- Mark one thing that should move right
- Find the constraint — map only around it

EXERCISE · 15 MIN

Swap and stress-test

- Swap maps with another pair
- Ask: what did we leave off the chain?
- Ask: where would we place this differently?
- One decision per map: buy, build or evolve

BACK TOGETHER

What did the maps say?

- One insight per table, one sentence
- Where did the room disagree?
- What moves right first?

06

Spare · buy vs build

Kettles and whiteboards

- The kettle: a product. Buy it, never build
- The whiteboard: rent, don't make
- Build only where customers pay you to differ
- If you build a kettle, you are the map's problem

07

Spare · inertia

What resists moving right

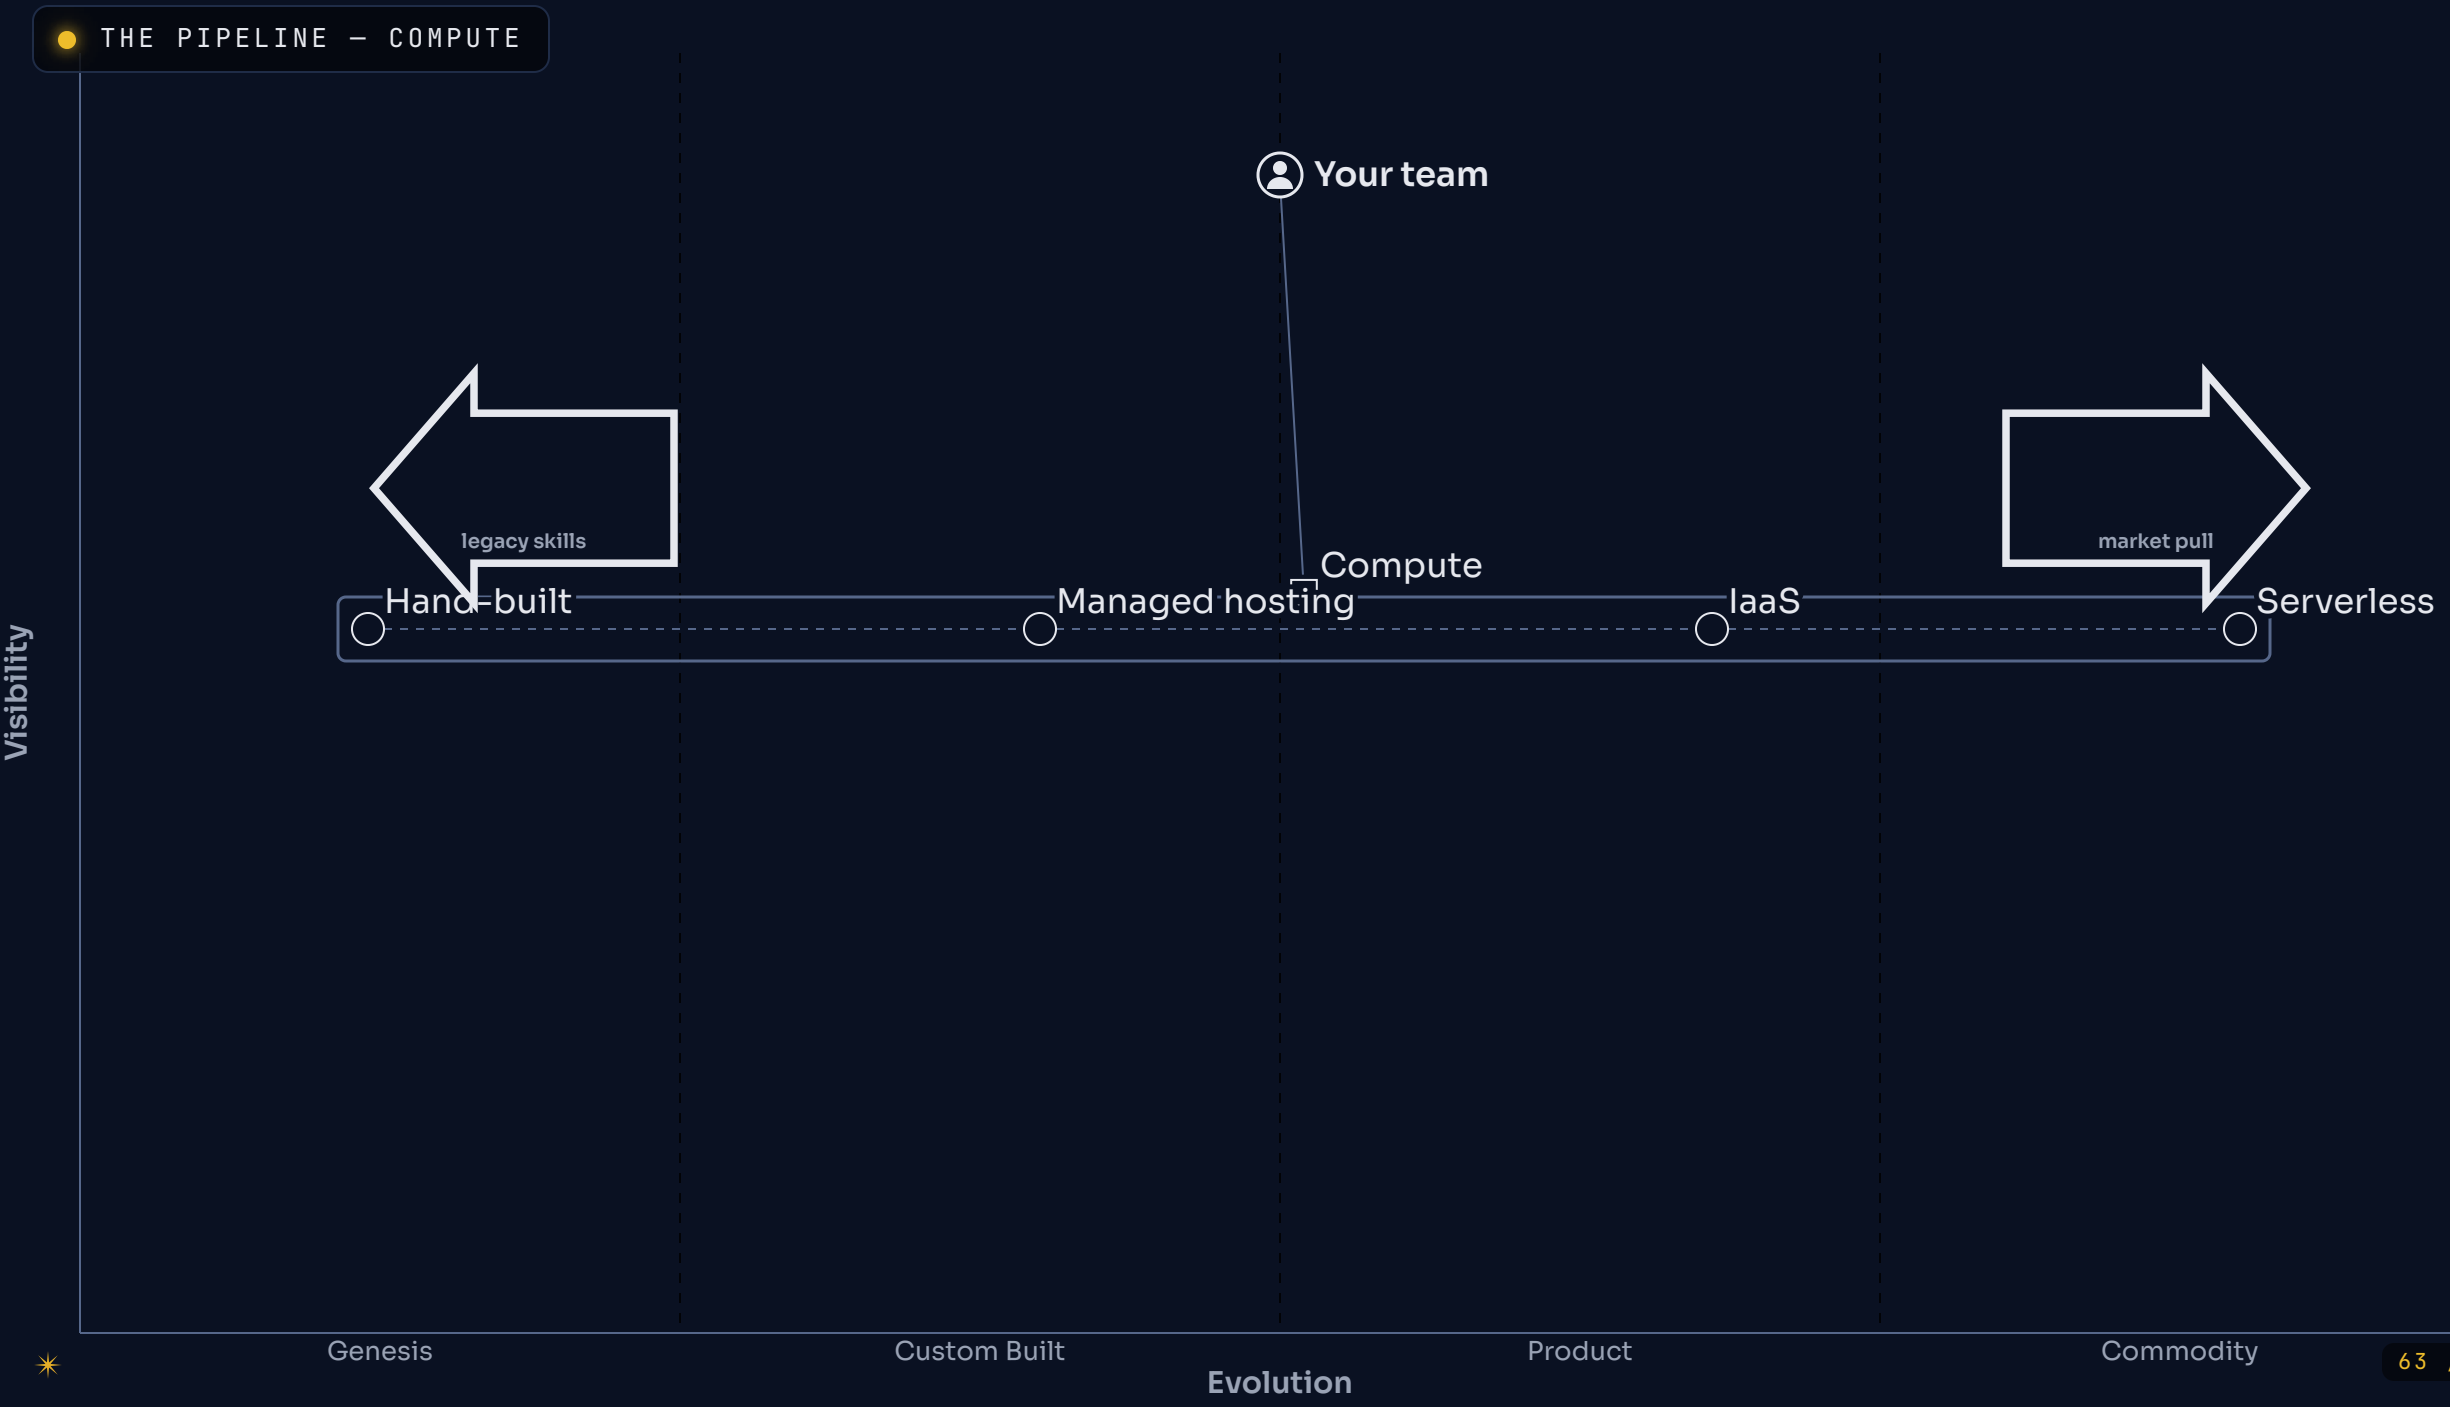

- Facilitation: custom built, hard to change
- Inertia is a signal — someone loses when it moves
- Productising can kill the craft, or scale it
- Evolve it right, or route around it

08

Spare · the pipeline

Several ways to do one thing

- One category, several substitutes you can pick
- Each sits at its own evolution stage
- They evolve on their own clocks
- Market pulls; we can push or hold
